Supplemental Examiner Amendment

1. Renumbered Claims 14 and 18 has been amended to read:

Claim 14.

a computer implemented method of performing aeroelastic flutter analysis to determine the aeroelastic flutter characteristics from one or more completed repairs performed on a structure, the computer implemented method comprising:

a processor determining input parameters relating to one or more completed repairs performed on a structure;

the processor determining a training set of characteristic I/O pairs;

the processor generating a neural network;

the processor training the neural network using the training set to generate a trained neural network;

the processor determining aeroelastic flutter characteristics of the structure based in part on the trained neural network in order to determine at least one of a flutter frequency and a flutter speed of the structure with the one or more completed repairs;
and

the processor determining whether the aeroelastic flutter characteristics of the structure with one or more completed repairs are acceptable.

Claim 18.

A computer implemented method of performing aeroelastic flutter analysis, the computer implemented method comprising:

A processor receiving at least one input parameter related to a completed repair of an aircraft structure;

the processor applying a predetermined neural network transfer function to the at least one input parameter to generate an aeroelastic flutter analysis result comprising at least one of a flutter frequency and a flutter speed related to the completed repair of the aircraft structure, wherein the aeroelastic flutter analysis result is for determining whether the aircraft structure with the completed repair is acceptable for flight; and

the processor outputting the result.

2. Authorization for the amendments has been given by Mr. Tim Klintworth by a fax received 7/10/2009
3. Renumbered Claims 1-47 are allowed.
